PROFESSIONAL SUMMARY

Innovative and task-driven IT professional with hands-on experience as an Assistant System Support Officer and, Network Technician providing technical support, troubleshooting hardware, software, network, and system issues, and ensuring the smooth operation of IT services. Skilled in diagnosing and resolving technical problems, supporting end users, maintaining IT infrastructure, and delivering reliable technical solutions in fast-paced professional environments. With a proven history of successfully delivering projects in web development, software development, and networking, I combine practical industry experience with strong analytical and problem-solving abilities. Proficient in frontend development, user interface design, code authoring, testing, debugging, and implementing new features based on user feedback. Experienced in networking fundamentals, including network installation, configuration, maintenance, and troubleshooting, with a strong understanding of networking as the backbone of modern IT systems.

KEY SKILLS

-HTML	- MYSQL	- CSS -PHP
- Adobe Photoshop	- Adobe Illustrator	-React.js development
-SQLite	-PostgreSQL	-JavaScript
-Problem Solving	- Java Programming	-Communication skills
-MongoDB	-Microsoft Office	-Leadership and Teamwork
-Time Management	-Multimedia Design	-Analytical Thinking
-Network Troubleshooting	-System Analysis and Design	-UI/UX Improvement

-XAMPP configuration and database setup -JavaFX Application Development

PROFFESSIONAL EXPERIENCE

(02nd February – 15th May 2026)

Network Technician Intern | Yourstech (Maseru East)

As a Network Technician intern at yourstech, I gained hands-on experience in both hardware and software environments. I installed and configured CCTV camera systems, ensuring proper setup, monitoring, and functionality. I also set up and configured internet connections from scratch, including router configuration, switch setup, and structured network cabling to ensure secure and stable connectivity. I worked extensively with networking, troubleshooting and resolving connectivity issues, maintaining network performance, and providing technical support for daily IT operations.

One of the major projects I participated in during my internship was the network installation project at the Senate of Lesotho and, traffic office in Leribe, Hlotse. During this project, I was actively involved in the installation and configuration of network infrastructure within the environment. My responsibilities included assisting with network cable installation, setting up and installing data points, connecting network devices, and ensuring proper cable management throughout the installation process. I also assisted in testing network connectivity and ensuring that internet and communication systems were functioning properly after installation.

This experience gave me practical exposure to working in a professional institutional environment and allowed me to gain a better understanding of how large-scale network installations are planned and implemented. This exposure strengthened my technical networking skills and improved my ability to work professionally on real-world networking projects. In addition, I developed practical skills in Data Analytics and Data Science by working with data collection, cleaning, and organization. I assisted in analyzing data to identify patterns and trends, and generated reports to support decision-making within the organization. I also worked with spreadsheets and basic data tools to manage and interpret data effectively, which strengthened my analytical thinking and attention to detail.

I further enhanced my technical profile by designing and developing a company website, applying my frontend development and user interface design skills to create a

user-friendly and responsive platform. Additionally, I handled system troubleshooting, maintenance, and technical support services, which improved my ability to diagnose issues, think critically, communicate effectively with users, and deliver efficient solutions in a fast-paced working environment.

(14th July 2026 – 1st September 2026)

Assistant System Support Officer (volunteer) | Parliament of Lesotho-The Senate

Provide first-line technical support by diagnosing and resolving hardware, software, network, and system issues. Install, configure, maintain, and troubleshoot computers, printers, and other IT equipment to ensure the smooth operation of ICT services. Configure and support network connectivity, shared resources, and user accounts while performing routine system maintenance, software installations, updates, and backups. Assist users with technical challenges, support meeting room technology and presentations, monitor IT systems, and respond promptly to support requests to minimize downtime and maintain business continuity. Collaborate with the IT team to implement technical solutions, maintain network infrastructure, and deliver reliable, efficient, and user-focused IT support.

Gain practical knowledge of system startup and shutdown procedures, basic fault diagnosis, and troubleshooting of the VIQ System, a recording and transcription system used to record and transcribe proceedings. Assist with identifying and resolving technical issues affecting the recording system to ensure reliable operation and continuity of services.

(02nd September 2026 – Present)
Assistant Procurement Officer | Office Technician | WonderTech (Pty) Ltd

At WonderTech (Pty) Ltd, I work across procurement and information technology, combining technical expertise with procurement coordination to support business operations, technology acquisition, and service delivery. This dual role enables me to apply my IT knowledge to both technical problem-solving and the identification, sourcing, evaluation, and procurement of technology solutions that meet organizational and client requirements. My responsibilities extend beyond office-based duties to include field visits whenever technical problems arise, allowing me to provide on-site assistance, investigate faults, and support the resolution of technical issues in operational environments.
In my procurement capacity, I coordinate quotation requests for IT equipment, networking infrastructure, computer hardware, software, and other technical products from local and international suppliers. I conduct supplier research, communicate with vendors, verify product specifications, confirm stock availability, and follow up on quotations to ensure timely responses. I also review and compare supplier quotations,

considering pricing, applicable VAT, delivery costs, warranty conditions, lead times, and technical compliance. Where necessary, I clarify product specifications, request supporting documentation, and coordinate procurement requirements to facilitate informed purchasing decisions. These responsibilities have strengthened my skills in supplier relationship management, commercial communication, quotation analysis, sourcing, and procurement administration.

My technical background gives me an advantage in procurement because I can assess technology requirements beyond pricing alone. I engage with suppliers regarding technical specifications, product compatibility, networking equipment, computing devices, and IT infrastructure requirements, helping ensure that products being sourced align with operational needs. By bridging the gap between technical requirements and commercial considerations, I contribute to more informed procurement decisions, effective supplier communication, and the sourcing of suitable technology solutions.

In my capacity as an Office Technician, I provide technical support by diagnosing and troubleshooting hardware, software, printer, and network connectivity issues. My responsibilities include configuring and maintaining office equipment, supporting computer systems, resolving network-related challenges, and assisting with routine IT maintenance. I also conduct field visits when technical issues require on-site intervention, where I assist in identifying faults, assessing equipment and infrastructure, troubleshooting connectivity problems, and implementing appropriate technical solutions.

This field-based experience strengthens my practical understanding of IT infrastructure and enables me to respond to technical challenges in real-world working environments. I work to minimize service disruptions, restore functionality, and ensure that users and clients receive reliable technical support.

Working across procurement, office-based technical support, and field operations has strengthened my ability to connect IT infrastructure requirements with procurement strategy, supplier coordination, and practical service delivery. This combination has developed my analytical thinking, problem-solving, communication, organizational, and decision-making skills. It has also given me practical insight into the technology lifecycle, from identifying technical requirements and sourcing appropriate equipment to troubleshooting, maintaining, and supporting technology in operational environments. By combining technical knowledge with procurement and supplier management experience, I can contribute to both the effective acquisition of IT resources and the reliable delivery of technical services within an organization.
